Patient experience survey: Results for patients treated in November 2018

Key findings

- National results for the four domains (communication, partnership, coordination, and physical and emotional needs) have remained broadly consistent across all 18 survey rounds.
- There was little variation between district health boards (DHBs).
- The national response rate was consistent with previous rounds at 23 percent.
- We have undertaken weighting, as before, in line with the methodology and procedure document: methodology and procedure document.
- Note: In the national results webpage, we display run charts to monitor statistically significant trends. The run chart for Table 1 allows the user to select DHB.
- Nationally, two of the lowest scoring questions have shown a significant improvement since the survey began (As shown in figure 3).

National results

Compared with quarter 3, 2018, scores for quarter 4, 2018 remained consistent for all domains

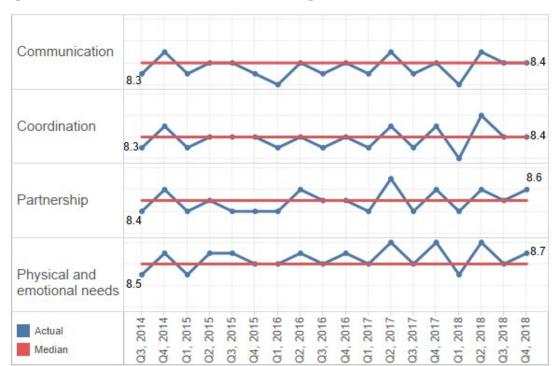

Figure 1: Run chart of the national average scores for the four domains, 2014–18

The physical and emotional needs domain rated the highest in all survey rounds. It includes the 'humanitarian' questions shown in Figure 2, which continuously score highest.

The three questions shown in Figure 3 continuously scored the lowest of all the survey questions. As can be seen in Figure 3, the scores for the question 'Did the hospital staff include your family/whānau or someone close to you in discussions about your care?' have improved significantly since quarter 1, 2017. The median has increased from 55.2 to 58.5 percent. The scores for the question 'Do you feel you received enough information from the hospital on how to manage your condition after your discharge?' have also improved since quarter 2, 2016. The median has increased from 59.5 to 60.8 percent. Apart from quarter 1, 2018, this increase has been sustained.

Figure 2: Run chart of the highest-rating questions of the four domains, 2014–18 (percent of patients answering most positively)

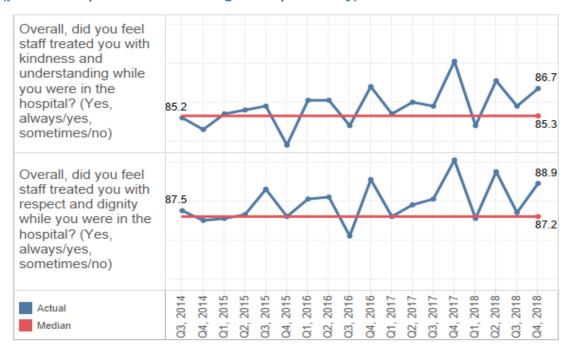

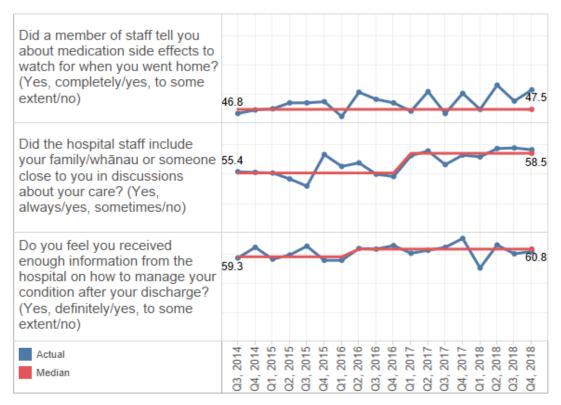

Figure 3: Run chart of the lowest-rating questions of the four domains, 2014–18 (percent of patients answering most positively)

Response rates

The national response rate was consistent with previous rounds at 24 percent.

Figure 4 shows the breakdown of response rates by survey distribution method. Postal surveys have a high processing cost, so we encourage DHBs to undertake surveys via email or SMS where possible. The response rate for email is larger than the rate for postal surveys, in quarter 2, 2018, for only the second time.

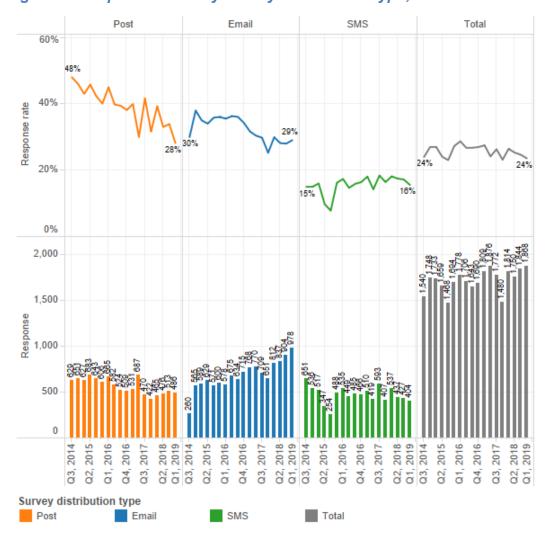

Figure 4: Response rates by survey distribution type, 2014–18

Response rates per DHB varied from 11 to 36 percent (see Table 1). Three DHBs achieved a 30 percent response rate or above in the current survey round. DHBs are required to have at least 30 responses for results to be meaningful. (See also Appendix 1 for per-DHB scores for each of the four domains.)

Table 1: Response rates by DHB (percentage), 2014–18

Representation of respondents

Although respondents were reasonably representative of all ages and genders there remain areas of under and over representation. Younger people tend to be under-represented, while those between 65–74 were over-represented. NZ Europeans tend to be over-represented while other ethnicities were under-represented.

Table 2: Representativeness by demographic group, November 2018
Respondents by age group

| Group | Patients discharged (%) | Respondents (%) |
|-----------|-------------------------|-----------------|
| Age 15–24 | 8 | 3 |
| Age 25–44 | 25 | 21 |
| Age 45–64 | 25 | 27 |
| Age 65–74 | 17 | 25 |
| Age 75–84 | 16 | 18 |
| Age 85+ | 8 | 6 |

Respondents by gender

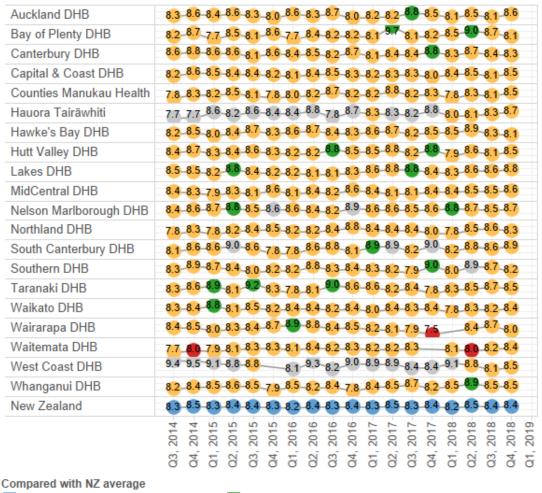

| Group | Patients discharged (%) | Respondents (%) |
|--------|-------------------------|-----------------|
| Female | 59 | 58 |
| Male | 41 | 42 |

Respondents by ethnicity

| Group | Patients discharged (%) | Respondents (%) |
|-----------------|-------------------------|-----------------|
| NZ European | 72 | 80 |
| Māori | 15 | 10 |
| Pacific peoples | 5 | 3 |
| Asian | 7 | 5 |
| Other | 1 | 2 |
