Te whakanui ake i te hauora ā-tinana | Maximising physical health project context

Dr Clive Bensemman: Clinical lead

Wi Keelan: Kaumatua and Māori Cultural
Advisor

Johnnie Potiki: Consumer Advisor,
Te Whatu Ora – Health New Zealand
Southern

14 September 2022

Maximising physical health priority area

- Project scope worked up after meetings with experts from the 'Equally Well Collaborative', primary care, Māori, consumer and whānau, and academics
- Equity will be at the centre of this project
- Making a difference requires a whole-of-health-service approach
- Co-design process will start in November 2022

What we know about the problem

- Life expectancy for people in contact with specialist mental health and addiction services is reduced by up to 25 years
- Two-thirds of this premature mortality is related to preventable and treatable conditions: cardiovascular disease, cancer and other physical illnesses

Aim: Improve the reliability of timely cardiovascular monitoring, screening and treatment for people on clozapine and intra-muscular injection anti-psychotic medication

Considerations

- What does screening include? Focus on cardiometabolic screening, baseline and annual screening
- Is data available to measure change?
- Cohort to include consumers using specialist mental health care services and primary care services
- Needs to be done within the two-year project window and be achievable with our limited team resources

People on IMI or Clozapine medication

- In the period July 2018 and June 2019, 4,239 people were dispensed Clozapine, and 7,487 people were dispensed an intramuscular injection.

ETHNICITY BREAKDOWN OF PEOPLE ON CLOZAPINE MEDICATION

■ Māori ■ Non-Māori, non-Pacific ■ Pacific peoples

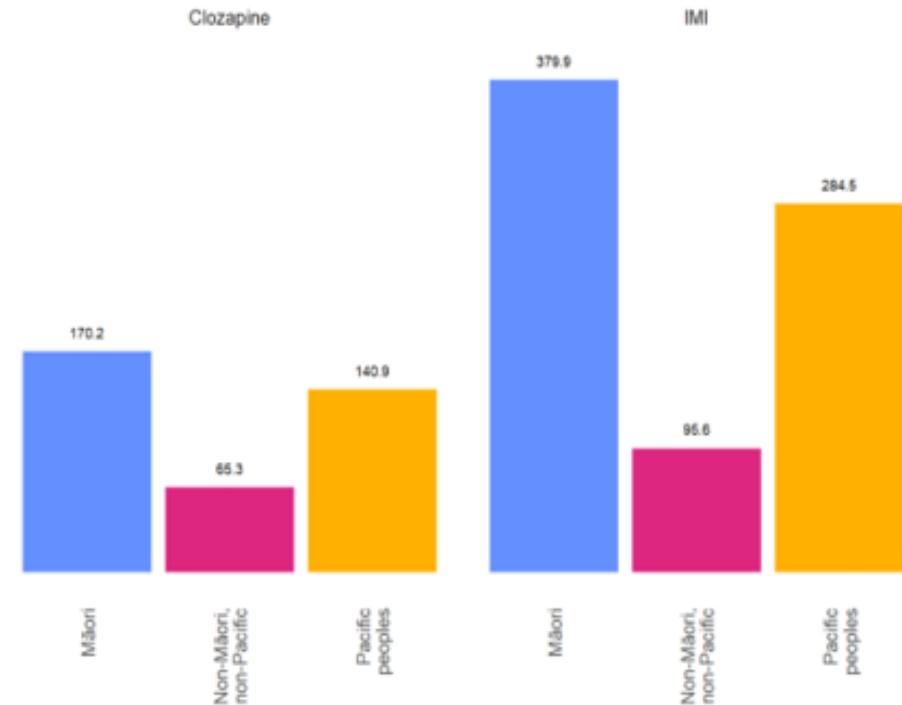

ETHNICITY BREAKDOWN OF PEOPLE ON IMI MEDICATION

■ Māori ■ Non-Māori, non-Pacific ■ Pacific peoples

Breakdown of cohort per 100 000 population

Screening

Percentage of cohort that had cardiovascular screening completed, by ethnicity

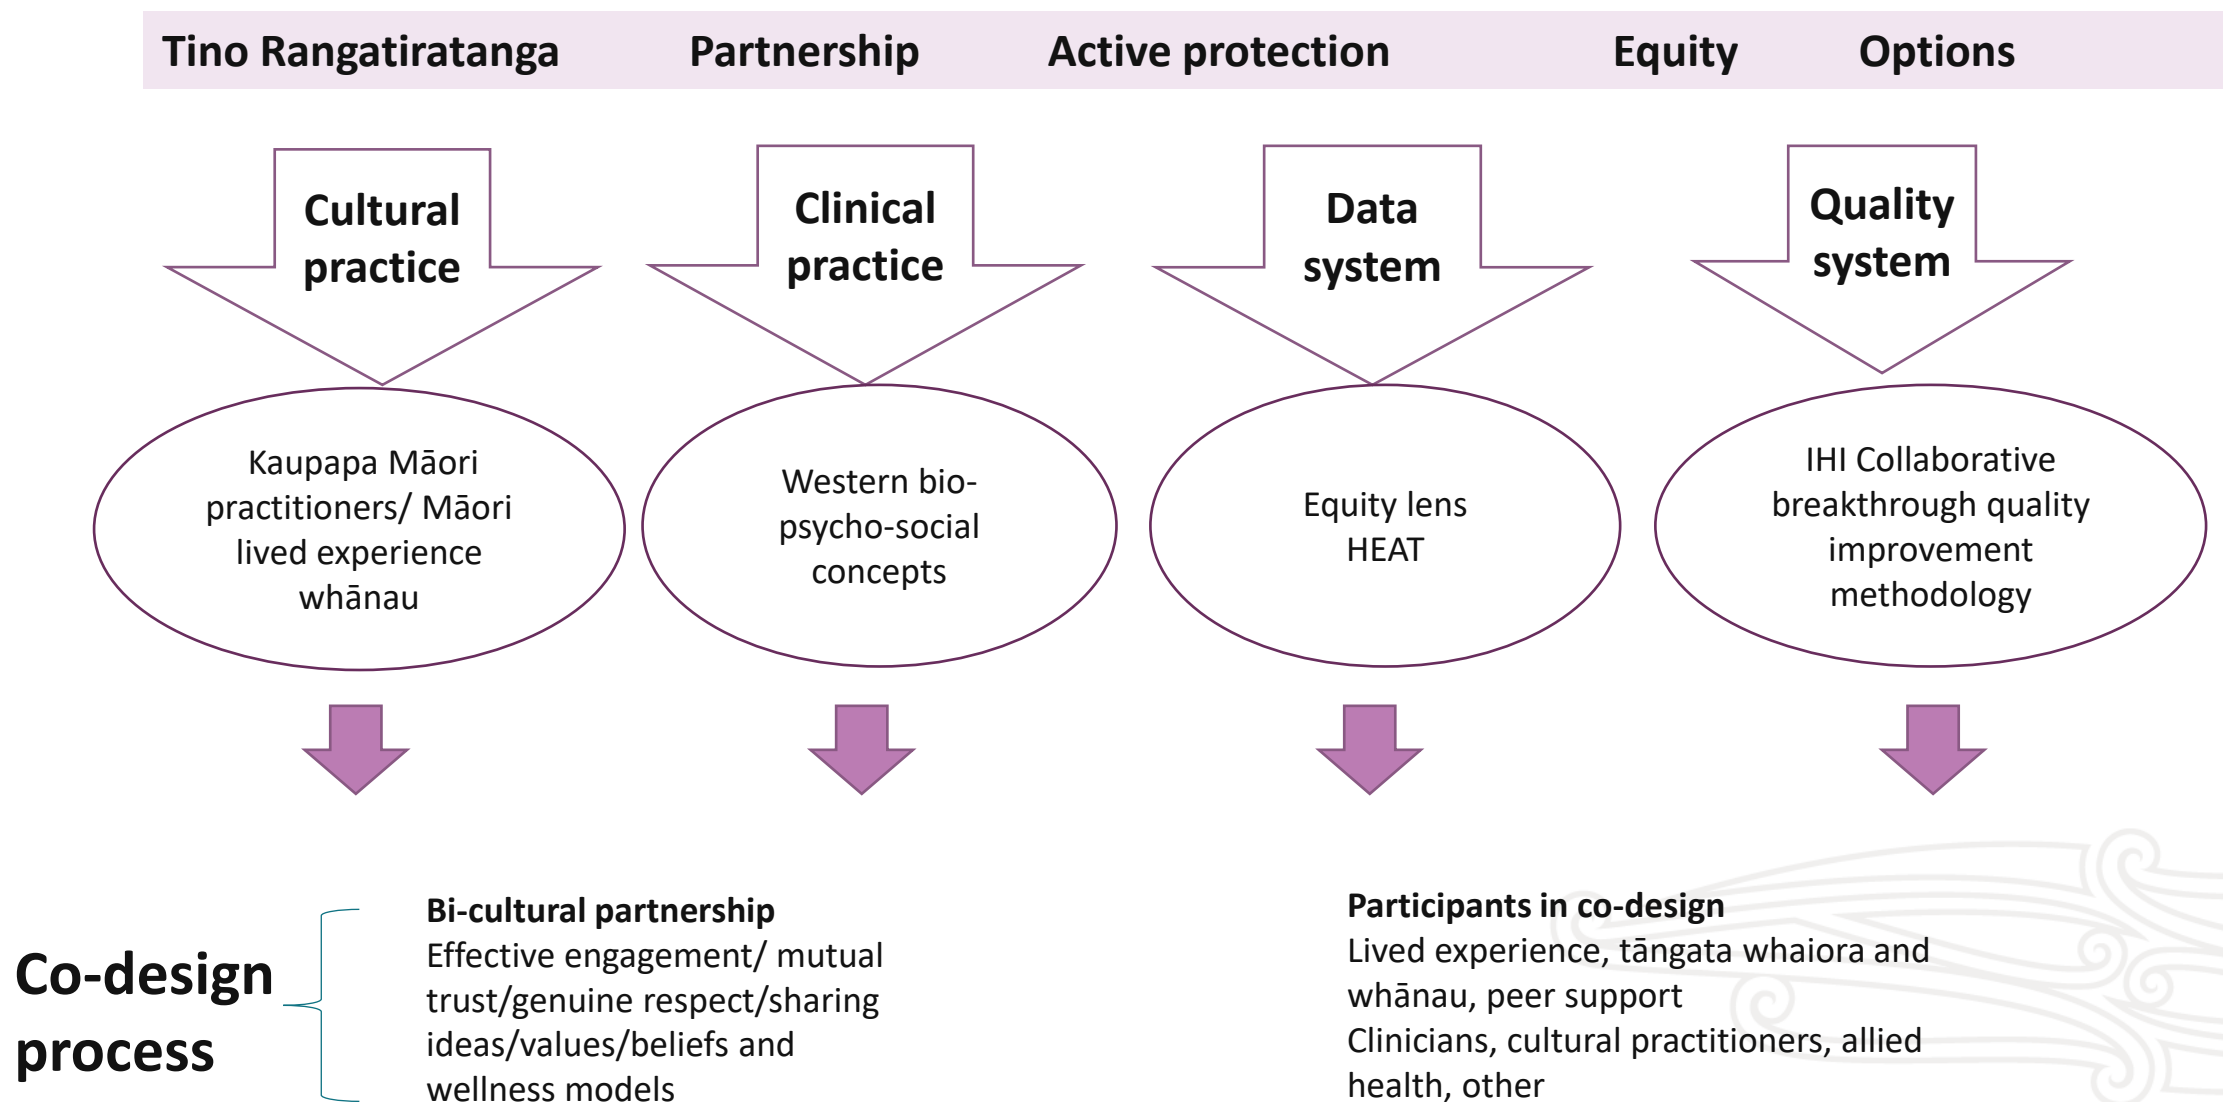

Data shows % of people who had at least one of lab ordered within the 12-month period between July-2018 and June-2019

Interventions

Percentage of cohort that were dispensed an intervention medication, by ethnicity

Mental health and addiction quality improvement programme

1.	<u>Aukatia te noho punanga: noho haumanu, tū rangatira mō te tokomaha</u> <u>Zero seclusion: safety and dignity for all</u>
2.	<u>Te tūhono i ngā manaakitanga, te whakapai ake i ngā whakawhitinga ratonga</u> <u>Connecting Care: Improving service transitions</u>
3.	<u>Te ako mai i ngā pāmamaetanga me te wheako tāngata whaiora me te whānau</u> <u>Learning from adverse events and consumer, family and whānau experience</u>
4.	<u>Te whakanui ake i te hauora ā-tinana</u> <u>Maximising physical health</u>
5.	<u>Te whakapai ake i te whakahaere rongoā, i te tūtohu rongoā hoki</u> <u>Improving medication management and prescribing</u>

Overview of the journey

WWW.QI.ELFT.NHS.UK  @ELFT_QI

Quality improvement projects

- Outcomes focused
- Contain specific achievable goals and stretch goals
- Include a timeline
- Clearly state the target population
- Succinct
- Provide value (humanistic and/or efficiency, effectiveness)

Te Pou – what we know

Drivers of poor physical health include exposure to known risk factors such as:

- low socio-economic status resulting in restricted access to employment, social stigma, isolation, poverty and poor housing
- medication side effects and in particular their contribution to cardiovascular disease, obesity, metabolic syndrome and type 2 diabetes
- reduced access to and quality of health care due to financial barriers, stigma and discrimination
- systemic issues in healthcare delivery, such as the separation of physical, mental health and addiction services and a need for more clarity regarding the roles and responsibilities for the physical health of people experiencing mental health and addiction issues

Why 'Maximising physical health'

- Knowledge action gap in care, inequity, and safety
- Literature:
 - There is evidence that the gap of premature mortality is widening for people with mental health conditions, relative to the general population (Hayes, Marston, Walters, King & Osborn, 2017)
 - People who experience serious mental illness, particularly schizophrenia, have a premature mortality rate two to three times higher than the general population (Cunningham et al., 2014)
 - It has been estimated that cardiovascular disease accounts for 40 to 50 per cent of the excess mortality in schizophrenia (Ringen, Engh, Birkenaes, Dieset & Andreassen, 2014)
- Previous work
 - Equally Well collaborative
- What matters
 - Experts by experience

Scoping project example

Project scoping

Cohort of focus

- To manage the scope of this project from a national perspective, the cohort for this quality improvement mahi are consumers on particular antipsychotic medications (clozapine and long-acting intramuscular injections).
- This cohort was chosen because this group is readily identifiable and antipsychotic medications (clozapine and long-acting intramuscular injections) are known to have negative cardiovascular impacts.

Draft aim

- This is an initial national aim statement that includes aspects that can be measured nationally.
- The aim will be refined through the co-design process and complemented with local measures.

To increase the rate of screening for cardiometabolic risk to 90% for consumers at increased risk due to anti-psychotic medication treatment (clozapine and intramuscular injection) by 1 May 2024.

Delivering improvement through teamwork and leadership

To achieve improvement across a whole organisation there needs to be strong teamwork and leadership. One person working alone or groups of people working in an uncoordinated way will not achieve it.

As Brent James, from Intermountain Healthcare notes, a mature quality system uses both breakthrough and incremental improvement at the same time (James B, 2012):

Planning for a successful project

- Leadership – a priority, removes barriers
- Effective team – skills, time, continuity
- Partnerships – Equally Well collaborative, experts by experience
- Think about how to integrate project work into busy day-to-day work
- Effective feedback loops
 - data – learning our way to better

Equally
Well 

National data

Start thinking about your feedback loops for the project now

- Data will be required throughout your project
- Small regular data collection– enough to learn
- Use of multiple data sources – focus is on learning
- Co-design – measure what matters
- Always consider how will you know a change is an improvement

*“what matters more than raw data is our ability to place these facts in **context** and deliver them with **emotional impact**”*

Daniel Pink –A whole new mind 2008

Te whakanui ake i te hauora ā-tinana | Maximising physical health project timeline

Jacqueline Ryan: Project lead, Quality
improvement advisor, Mental health and
addiction quality improvement programme

14 September 2022

Co-design

- Purpose of co-design phase
 - need to hear what matters most to consumers and family/whānau and staff
 - are there ideas that would make things better that haven't been considered?
 - what is the Māori lens on this?
 - what do staff think?
 - what does the ideal service look like?
- Co-design workshop one, supra-regional
 - Tuesday 18 October - Wellington
 - Thursday 20 October - Auckland

What's next?

(between now and co-design workshop one)

- Project team members to complete Co-design in health: an introduction e-learning module (90 minutes online learning)
- Identify co-design partners
- Confirm project team members
- Consider what data/information you are going to capture
- Investigate the current state for your cohort
- Think about how you are going to identify your cohort
- Have regular project team meetings, ½ hour huddles
- Start co-design process if ready

Resources

- Click here for: [Co-design in health: an introduction e-learning module](#)
- Quality in action co design and measurement workbooks
- Local quality improvement team composition guidance
- [Project one-page summary](#)
- Storyboard template, ready for co-design workshop one on 2/3 November

Storyboard

- **Project team**

Who is part of your multidisciplinary team and their role?

- **Measures**

What will your measures be (quantitative and qualitative)?

Include any baseline data for your chosen measures if available.

- **Equity**

How will you consider equity as part of your project?

What does your data tell you about your different populations?

Thank you – any questions?
